Representative data of NanoBRET[™] Tracer K-4 competition in HEK293 cells transiently expressing EPHB3-NanoLuc[®] Top Panel: Overview of the NanoBRET[™] TE Assay. Bottom Panels: HEK293 cells were first transfected with EPHB3-NanoLuc[®] Fusion Vector and then were subsequently resuspended in OptiMEM prior to seeding into 96-well plates: Bottom Left Panel: Tracer affinity was measured by treating the cells with increasing concentrations of tracer in the presence or absence of a molar excess of unlabeled compound. Bottom Right Panel: The affinity of the unlabeled compound was measured at multiple fixed concentrations of the tracer, where the IC₅₀ at the recommended tracer concentration is depicted in orange (3).

Notes:

- NanoBRET[™] Tracer K-4 is supplied within the NanoBRET[™] TE Intracellular Kinase Assay, K-4 products (N2520, N2521, or N2540). Additional assay components are supplied within these kits, including the NanoBRET[™] Nano-Glo[®] substrate, Extracellular NanoLuc[®] Inhibitor, tracer dilution buffer, and transfection carrier DNA. Additionally, DDR1-NanoLuc[®] control vector is provided in products NV2520 and NV2521. For full details, please see the Promega website or technical manual for these products.
- 2) Assay category is defined by the assay window at the recommended tracer concentration. It is detailed in table 2 within the NanoBRET[™] TE Intracellular Kinase Assay, K-4 technical manual.
- 3) See section 5 of **NanoBRET[™] TE Intracellular Kinase Assay, K-4** technical manual regarding approaches to improve quantitative analysis of test compound affinity.
- 4) NanoBRET[™] TE Intracellular Assays have also been applied to Residence Time analysis. For a kinase example, please refer to Forster, M. *et al.* For an HDAC example please refer to Robers, M.B. *et al.*
